INTRODUCTION

Deaton ([1997](#))

The quick brown fox jumped over the lazy dog¹.

MODEL

$$\begin{aligned} \max_{c_t, k_{t+1}} \sum_{t=1}^{\infty} \beta^t u(c_t) \\ \text{s.t. } c_t + k_{t+1} \leq f(k_t) + (1 - \delta)k_t \end{aligned}$$

ESTIMATION FRAMEWORK

$$\begin{aligned} \text{outcome}_{ict} &= \alpha_i + \sum_{k=0}^2 \beta_{t-k}^p PPI_{ict-k} + \gamma_{ct} + \epsilon_{ict} \\ \text{outcome}_{ict} &= \alpha_i + \sum_{k=0}^2 \beta_{t-k}^p PPI_{ict-k} + \sum_{k=0}^2 \beta_{t-k}^m CPI_{ict-k} + \\ &\quad \gamma_c \times trend_t + \epsilon_{ict} \end{aligned}$$

DATA

MAKE PLOT IN DOCUMENT

¹but the dog's laziness is heavily debated
